

CURE MY NATION (CMN)

Health Rights Platform

Platform Overview & Product Documentation

Cure My Nation NGO | Nigeria | Version 1.0

1. Overview

Cure My Nation (CMN) Health Rights Platform is a digital platform built by the Cure My Nation NGO to protect and empower patients across Nigeria. It gives every Nigerian — regardless of education level, location, or income — a simple, safe way to know their health rights, report abuse or mistreatment by hospitals, and get real-time support. The platform is available as a web application.

Mission Statement

Cure My Nation is more than a reporting app — it is a civic tool for health justice. It turns an isolated, frustrated patient into an informed, empowered citizen who knows their rights, can document violations, and can demand accountability.

2. Problem Statement

Healthcare violations in Nigeria are widespread and underreported. Patients are routinely denied treatment, overcharged, mistreated, or kept in the dark about their own medical decisions. The key reasons violations go unaddressed include:

- Patients do not know their rights — Most people are unaware that a legally recognised Patient Bill of Rights exists.
- No accessible reporting channel — Reporting a hospital traditionally requires navigating slow and intimidating government bureaucracies.
- Vulnerable groups are most affected — Rural communities, women, the elderly, and low-income patients suffer disproportionately.
- Data is not tracked — Without collected data, advocates and policymakers cannot pressure governments to act.

CMN fills this gap by putting a reporting tool, a rights guide, an AI assistant, and live human support all in one place — accessible from a phone.

3. Platform Features

The CMN platform is built around eight core functional areas:

#	Feature	Description
1	Patient Bill of Rights	Publishes Nigeria's 11 core patient rights in plain language, available in 10 languages including Yorùbá, Hausa, Igbo, Pidgin, French, Arabic, Swahili, Fulfulde, and Portuguese.
2	Violation Reporting	Registered users can file structured violation reports in minutes — selecting violation type, hospital name, description, and priority level. All reports are stored securely and tracked.
3	Case Tracking Dashboard	Users monitor report progress in real time: Reported → In Progress → Resolved or On Hold. Personal statistics show total cases filed, resolved, and resolution rate.
4	AI-Powered Health Chatbot	A built-in AI chatbot (powered by OpenAI) provides round-the-clock answers on symptoms, medications, patient rights, and guidance on experiencing mistreatment.
5	Live Admin Chat	Users chat directly with a Cure My Nation support agent. Admins receive real-time sound-alert notifications and can manage all active conversations in a single panel.
6	Blog & Events	CMN publishes health advocacy articles and organises community events (webinars, health drives, town halls). Accessible to both registered users and the general public without an account.
7	Educational Resources	A library of guides covering medical malpractice, medication safety, mental health rights, and consumer protection under Nigerian law.
8	Admin Control Panel	A dedicated admin dashboard with nationwide violation analytics, full violations table with filtering and search, Excel export, blog and event management, and live chat management.

4. Feature Details

4.1 Patient Bill of Rights (PBOR)

The platform publishes Nigeria's 11 core patient rights in plain, accessible language. Recognising that Nigeria is a linguistically diverse nation, the PBOR is available in 10 languages:

English Yorùbá Hausa Igbo Pidgin	French Arabic Swahili Fulfulde Portuguese
--	---

4.2 Violation Reporting

Any registered user can file a structured violation report through a guided form. The report captures:

- Violation type (e.g., denial of treatment, overcharging, patient neglect, privacy violation)
- Name and location of the hospital or facility
- A detailed description of what occurred
- Priority level assigned by the reporter

Every report is stored securely in the system and assigned a unique tracking ID.

4.3 Case Tracking Dashboard

The user dashboard provides full visibility into the status of all submitted reports. Reports progress through a transparent lifecycle:

Reported → In Progress → Resolved / On Hold

Users can also view aggregate statistics: total cases filed, number resolved, and their personal resolution rate.

4.4 AI-Powered Health Chatbot

A conversational AI assistant (powered by OpenAI) is available 24/7 within the platform. Users can ask questions about:

- Health symptoms and general medical guidance
- Medication information and safety
- Their rights as patients under Nigerian law
- What steps to take if they experience mistreatment

4.5 Live Chat with Admin Support

The live chat system connects users directly to CMN support agents. Key capabilities include:

- Real-time message delivery to the admin panel
- Sound alert notifications for incoming messages
- Online/offline status control for admin agents
- Centralised conversation management across all active users

4.6 Blog & Events

The CMN blog publishes in-depth health advocacy articles. The events calendar lists upcoming webinars, health drives, and community town halls. Both sections are publicly accessible — no account is required to read or browse.

4.7 Educational Resources

A curated library gives users access to plain-language guides on topics including:

- Medical malpractice — what it is and how to respond
- Medication safety and patient responsibilities
- Mental health rights in Nigeria
- Consumer protection provisions under Nigerian law

4.8 Admin Control Panel

Platform administrators have access to a full-featured dashboard that provides:

Capability	Detail
Violation Analytics	Nationwide totals broken down by status (Reported, In Progress, Resolved) and priority (Critical, High, Medium, Low)
Violations Table	Full sortable table with filtering by status, priority, and keyword search
Excel Export	One-click export of all or filtered violations for reporting and advocacy use
Blog Management	Create, edit, and delete blog posts from the admin panel
Events Management	Create, edit, and delete community events
Live Chat Management	Respond to user messages; set agent online/offline availability

5. Product Roadmap

CMN is built for growth. The following roadmap outlines planned enhancements across three development horizons:

Horizon	Planned Features
Short Term	• Push Notifications — Alert users when their violation status changes (email + in-app) • Anonymous Reporting — Allow reports without account registration to protect whistleblowers • Evidence Upload — Let users attach photos, scanned receipts, or documents • Search & Filter on Blog/Events — Filter articles by topic, events by state and date
Medium Term	• State-Level Analytics — Public heatmaps showing which states and hospitals have the most reported violations • Lawyer/Advocate Referral — Connect users whose violations are serious with legal aid organisations • SMS Reporting — Allow users in areas with no internet to report violations via SMS shortcode • Offline Mode (Mobile) — Fill out violation reports offline; auto-submit when connectivity returns
Long Term	• Government & Hospital Integration — Formal API to send verified reports to the National Health Commission • AI Case Advisor — AI that reviews submitted violations and recommends appropriate legal or regulatory action • Community Forums — Peer-to-peer support spaces for patients to share experiences and receive community guidance • Multilingual AI Chatbot — Native chatbot responses in Hausa, Yorùbá, and Igbo • Verified Hospital Ratings — Community-driven hospital rating system based on confirmed user reports

6. Social Impact

As the platform grows, CMN will build the most comprehensive database of healthcare violations in Nigeria — giving advocates, journalists, and policymakers the evidence they need to drive systemic change.

For Patients	For Advocates & Policymakers
--------------	------------------------------

Know your rights, document violations, access support — all from a single platform on your phone.	Access aggregated, verified data on healthcare violations to drive legislative and institutional reform.
For Journalists Use CMN data to investigate systemic patterns of healthcare abuse and hold institutions accountable.	For NGO Partners Collaborate on referrals, legal aid, and community outreach using real-time violation data.
